

Statement of Purpose

BDAC Ecosystem Restoration Work Group

The overall purpose of the BDAC Ecosystem Restoration Work Group is to identify and develop options to address policy issues related to the development of an effective Ecosystem Restoration Strategy for the CALFED Bay-Delta Program. Key policy issues that may be addressed by the Work Group include (but are not limited to):

- ecosystem restoration goals for a comprehensive strategy to restore critical ecosystem structure and function;
- development of an adaptive management strategy; and
- institutional assurances/structure necessary to ensure restoration of ecosystem health.

The Work Group will produce summaries of these issues for BDAC to promote better understanding and consideration by the full BDAC. Products developed by the Ecosystem Restoration Work Group will be critical in Phase II of the CALFED Bay-Delta Program as the process of analyzing, evaluating, and enhancing alternatives is carried out.
